

Jonathan Aucancela

Security-focused Software Engineer

✉ jonathan_jd@outlook.com ☎ +593 998 956 361 📍 Quito, Ecuador 🌐 [Portfolio](#) [LinkedIn](#) [GitHub](#)

Summary

Security-focused Software Engineer specializing in the intersection of AI systems and application security. Active CTF competitor (HackTheBox, TryHackMe) with hands-on experience in web exploitation, privilege escalation, and network reconnaissance. Working knowledge of OWASP LLM Top 10, MITRE ATLAS, NIST AI RMF, and Ecuador's LOPDP data protection law. Background building secure full-stack systems with JWT auth, encryption (AES-256), and least-privilege deployments. Focused on AI security and compliance for regulated sectors in LATAM.

Experience

Universidad Tecnológica Equinoccial - UTE Quito, Ecuador
Software Developer Jr. May. 2026 - Present
Software Developer Jr. — Developer on the ITIC team handling Oracle Banner ERP and Sicafe academic systems. Work involves direct exposure to sensitive student and financial data, including stored procedures, query design with attention to SQL injection prevention, and access control on institutional databases (PIDM-based identity model). Familiarity with TFS/TFVC version control and code review workflows.

Freelancer Remote
Full Stack Developer Sep. 2025 - May. 2026
Full Stack Developer — Sep. 2025 - May. 2026. Designed and deployed production systems for education and cooperative finance clients, with attention to authentication (JWT, OAuth), encryption at rest and in transit, secrets management, and OWASP Top 10 mitigation. Multi-tenant data isolation in Supabase row-level security.
<https://davidaucancela-portfolio.vercel.app/#dev>

ESPOCH — DTIC Chimborazo, Ecuador
IT Intern Sept. 2024 - Feb. 2025
IT Intern on the DTIC team supporting institutional academic and administrative systems. Reviewed and corrected production code for stability and security, performed maintenance and incident response, and used Linux for log analysis and diagnostic commands. Direct exposure to operational security practices in an environment handling sensitive institutional data.

Education

Escuela Superior Politécnica de Chimborazo - Espoch Software Engineer • 9.20
Information technologies Chimborazo, Ecuador • May. 2021 - Jan. 2026
Software engineering training with an emphasis on systems development, databases, and application architecture. Graduation project focused on the complete development of a web system incorporating semantic search using NLP and reinforcement learning.

Cambridge - ESPOCH English proficiency • 9
Languages Chimborazo, Ecuador • Dec. 2025 - Jan. 2026
I developed skills in listening comprehension, reading, writing, and oral communication. During the course, I strengthened my abilities to hold conversations in English, understand academic and technical texts, draft documents, and communicate ideas effectively in educational and professional settings.

Volunteer

IEEE Computer Society – Student Branch ESPOCH 2024 - 2025
Chimborazo, Ecuador
Collaboration on technology projects focused on innovation and the development of systems and software architectures. Representation of the university at international programming hackathons.

CODE ESPOCH - Multidisciplinary group 2023 - 2025
Chimborazo, Ecuador
Business logic development with Python-Django, integrating REST services for communication with various communication modules across different systems.

Publications

Development of a web storage system with semantic search for shipment registration at Universal Box01/08/2026

ESPOCH

The web storage system called “UBApp” was developed, which automates the processes of registering and searching for shipments. A natural language query module was integrated using a semantic process.

Featured Projects

LLM Observatory

Sep. 2025 - May. 2026

Open-source multi-tenant observability platform for LLM API usage (Claude, OpenAI). Real-time token, cost, and latency tracking via WebSocket. Discord budget alerts, AES-256 credential encryption, JWT auth. Built with FastAPI, PostgreSQL, and Docker Compose. Deployed on Railway.

CTF Practice - HackTheBox

Feb. 2024 - Present

Active CTF practitioner with team Creeper.exe. Completed HackTheBox Starting Point machines including Cap (IDOR + pcap credential extraction + Linux capability privilege escalation), Fawn, Facts, and Redis. Participated in V-Sandbox 00 CTF event (Quito).

SecuraBank

Dec. 2025 - Jan. 2026

Conversational AI agents for education-sector clients (Charlotte English School, Ilvem, Tomatis). Built with n8n orchestration, Kommo CRM integration, Supabase for state management, and LLM APIs for natural language understanding. Handles lead qualification, scheduling, and FAQ automation in production.

Skills

 AI Security OWASP LLM Top 10, MITRE ATLAS, NIST AI RMF, prompt injection mitigation	 Application Security OWASP Top 10, JWT/OAuth, RBAC, AES-256 encryption, secrets management, RLS	 Offensive Security Nmap, Burp Suite, Metasploit, OWASP ZAP, Wireshark, Linux privilege escalation
 CTF Platforms v-Sandbox, TryHackMe, HackTheBox	 DevOps Kali Linux, Ubuntu, macOS, Windows Server	 Infraestructura Docker, Docker Compose, GitHub Actions, Railway

Certifications

IBM SkillsBuild Cybersecurity IBM	2026	Claude Code 101 Anthropic	2026	Claude Code in Action Anthropic	2026
CompTIA Security+ CompTIA	In progress	Python LinkedIn Learning	2025		

Languages

English B2	Spanish Native
