

Jonathan Aucancela

AI Systems Engineer

✉ jonathan_jd@outlook.com 📞 +593 998 956 361 📍 Quito, Ecuador 🌐 Portfolio 🔗 LinkedIn 🐙 GitHub

Summary

AI Engineer focused on building production-grade LLM applications and observability systems. Experience integrating Claude, OpenAI, and open-source models (Ollama, Qwen) into real business workflows: semantic search, RAG pipelines, conversational agents, and multi-tenant observability platforms. Background in full-stack development (Python, Django, FastAPI, Next.js) with deployments on Railway, Vercel, and Supabase. Interested in applied AI for regulated sectors.

Experience

Universidad Tecnológica Equinoccial - UTE	Quito, Ecuador
Software Developer Jr.	May. 2026 - Present
Developer on the ITIC team working with Oracle Banner ERP and Sicaf systems. Building ETL pipelines, stored procedures, and data infrastructure that supports academic and administrative reporting. Strong foundation in working with structured enterprise data — directly relevant to building RAG and AI systems over institutional data sources.	
Freelancer	Remote
Full Stack Developer	Sep. 2025 - May. 2026
Design and deployment of AI-powered automation systems for clients in education and cooperative finance. Built conversational WhatsApp agents using n8n, Kommo CRM, Supabase, and LLM APIs (OpenAI, Claude). Integrated semantic search and document processing pipelines into existing business workflows.	
https://davidaucancela-portfolio.vercel.app/#dev	
Firma Consulting	Quito, Ecuador
Full Stack Developer	Dec. 2025 - Jan. 2026
Backend and frontend for a virtual financial assistant for cooperative management. .NET Core, React, MySQL, Redis. Integration of LLM-based conversational layer for financial queries.	

Education

Escuela Superior Politécnica de Chimborazo - Espoch	Software Engineer • 9.20
Information technologies	Chimborazo, Ecuador • May. 2021 - Jan. 2026
Software engineering training with an emphasis on systems development, databases, and application architecture. Graduation project focused on the complete development of a web system incorporating semantic search using NLP.	
Cambridge - ESPOCH	English proficiency • 9
Languages	Chimborazo, Ecuador • Dec. 2025 - Jan. 2026
I developed skills in listening comprehension, reading, writing, and oral communication. During the course, I strengthened my abilities to hold conversations in English, understand academic and technical texts, draft documents, and communicate ideas effectively in educational and professional settings.	

Volunteer

IEEE Computer Society – Student Branch ESPOCH	2024 - 2025
Chimborazo, Ecuador	
Collaboration on technology projects focused on innovation and the development of systems and software architectures. Representation of the university at international programming hackathons.	
CODE ESPOCH - Multidisciplinary group	2023 - 2025
Chimborazo, Ecuador	
Business logic development with Python-Django, integrating REST services for communication with various communication modules across different systems.	

Publications

Development of a web storage system with semantic search for shipment registration at Universal Box	01/08/2026
ESPOCH	
The web storage system called “UBApp” was developed, which automates the processes of registering and searching for shipments. A natural language query module was integrated using a semantic process.	

Featured Projects

LLM Observatory Open-source multi-tenant observability platform for LLM API usage (Claude, OpenAI). Real-time token, cost, and latency tracking via WebSocket. Discord budget alerts, AES-256 credential encryption, JWT auth. Built with FastAPI, PostgreSQL, and Docker Compose. Deployed on Railway. https://llm-web-production.up.railway.app/	Sep. 2025 - May. 2026
UBApp Comprehensive shipment management system with AI-powered semantic search, geographic visualization, and document generation. Built with Django (backend) and Angular (frontend), orchestrated with Docker Compose. Semantic search with OpenAI embeddings + pgvector. https://ubapp-frontend.onrender.com/login	Feb. 2025 - Dec. 2025
WhatsApp AI Agents Conversational AI agents for education-sector clients (Charlotte English School, Ilvem, Tomatis). Built with n8n orchestration, Kommo CRM integration, Supabase for state management, and LLM APIs for natural language understanding. Handles lead qualification, scheduling, and FAQ automation in production.	Dec. 2025 - Jan. 2026
Mare Vitae International Medical learning management system with AI-powered audio transcription. NestJS backend, Next.js frontend, Supabase, integration with OpenAI Whisper for class recording transcription. Payment integration via Datafast. https://www.marevitaeint.com/	Oct. 2025 - May. 2026

Skills

 LLM AI APIs Claude (Anthropic), OpenAI, GPT series, Whisper, Embeddings, Ollama, Qwen 	 Backend Core FastAPI, Django REST, .NET Core 	 Data Vector PostgreSQL, pgVector, Supabase, SSIS
 AI Dev Tools Apps N8N, Claude Code, Cursor, Obsidian, Open WebUI, OpenCode 	 DevOps Cloud Docker, Docker Compose, GitHub, GitHub Actions, Railway, Vercel, Linux 	 Computer Vision Other OpenCV, PyTorch, KerasCV

Certifications

Claude Code 101 Anthropic	2026	Claude Code in Action Anthropic	2026	Python 2 LinkedIn Learning	29/03/2026
Python - Django REST LinkedIn Learning	01/03/2026	Claude Certified Architect – Foundations In progress Anthropic			

Languages

English B2 	Spanish Native
